

## **Meetings**

### **Meeting 1**

**31st October**

**Attendees:** Aifric, Comfort, Rachel, Aine

**Topic:** Sequence diagrams

**Minute Taker:** Rachel

**Leader:** Aine

**Deputy:** Aifric

- For today's meeting, we wanted to get all the hard bits done first such as the object diagram, sequence and its sub-diagram and the state diagram.
- We looked and discussed the object diagrams that Afric had made and then decided it was very good, we discussed how the sequence diagram was going to be implemented using the object diagrams.
- We revised our previous use case and discussed on how the design should look like, at first we were all confused on how it should be designed but after looking at various examples and the notes on loop we finally decide on what use case should be used for the sequence diagram and the sub-diagram.
- We drew out the sequence diagram on paper to understand the flow better and make functions that can connect classes accurately.
